

## ETON PRA 80 – POWERFUL 80 MM (3") MIDRANGE DRIVER

Top sound in the entry-level class: If you want to expand an existing 2-way system in your vehicle to a 3-way system, the ETON midrange set is the perfect choice. The PRA 80 is also an ideal addition to the ETON PRA 16 or PRA 13 component systems.

The 80 mm (3") midrange driver has the typical ETON powder-coated metal basket in a torsion-resistant, flow-optimized double strut design. In addition, there is the newly developed PRA cone made from a rib-reinforced paper-glass fiber mixture – produced in a special manufacturing process.

During the manufacturing process, the volume is increased without changing the weight. The cone is therefore particularly light and also particularly rigid – the best conditions for dynamic, finely detailed reproduction, extremely precise and to the point!

The PRA 80 is the ideal midrange driver for an extension to a 3-way system: voices are reproduced warmly, full-bodied, precisely contoured and nuanced – with incredible stage depth and spatiality. The ETON mid-range speaker is very resilient and extremely dynamic thanks to the powerful ferrite magnet with a large core bore!

### KEY FEATURES PRA 80

- Ideal complement to the ETON component systems PRA 16 or PRA 13
- Powder-coated metal basket in double strut design with large ventilation openings
- Newly developed rib-stiffened paper-fiberglass cone
- Powerful ferrite magnet with large pole core bore
- Engineered in Germany
- Scope of delivery: 2 x midrange driver, 2 x speaker ring and grille

**Note:** Without active separation using an active filter in the amplifier or DSP, the optionally available ETON MRX-3W crossover set is required for the connection.

TECHNICAL DATA	PRA 80
Music power handling	30 W
Rated power handling	20 W RMS
Impedance	4 ohms
SPL	86 dB
Outer Ø	95 mm
Mounting Ø	74 mm
Mounting depth	39.4 mm
